

Multifibre fabric

Multifibre fabric can be used as an adjacent fabric in many color fastness tests, such as fastness to sweat, water or washing, to evaluate the color transfer of textile materials. It is a standardised fabric, made up of 6 bands of different fibres: acetate, cotton, nylon, polyester, acrylic and wool.

The change in color of the fabric swatch is measured using a grey scale.

Features

- Ribbon construction for economy, ease of handling and stability in use.
- Traceable batches for excellent continuity
- Available in 10 or 50 m rolls, or as precut pieces.
